

Company overview

The Missing Link connects you to the information you need by providing the highest quality, practical, achievable and technical environmental advice currently available. We also provide training solutions to support these services. Our assistance can save you dollars and reduce your legal risks, whilst protecting the environment, the safety of your staff and the public allowing you to be more competitive in a market place requiring increasingly green performance. This is truly the *optimal 'sustainable' result.*

The Missing Link offers outstanding practical, specialised environmental services that increase corporate flexibility, provide greater social and economic value for the client; deliver programs and training that optimise business systems, and improve operational efficiency whilst reducing risk. Our goal is to provide triple bottom line solutions under a 21st century green paradigm that empowers every client to achieve ongoing returns on investment at every level.

Small partnerships to deliver quality responses

The Missing Link regularly partners with other consultants to provide the ultimate flexibility for its client base. We successfully collaborate with other professionals to offer clients the specific skills they require for a particular deliverable, ensuring our clients receive the most effective and professional service.

Locals helping locals – Key Personnel

Kim Forde

B.Ed B. App. Sc
Director /Senior
Env Consultant
Kim Forde has extensive

experience as an environmental manager, with more than 15 years expertise in project management, integrated environmental health and safety systems development, environmental auditing, policy & strategy development, and site assessment & mitigation; in the private sector and for government bodies and NGOs in Australia.

Her work experience includes the energy industry through natural resource managers to tourism and training organizations, providing practical, specific technical advice to develop diverse and realistic solutions to operational requirements. These skills have been successfully applied in remote and challenging tropical environments across Australia across a range of industries.

Kim consults to Councils and developers on environmental issues, providing training and advice on codes of practice and sustainable development in practice; and facilitating effective community engagement processes.

Recently, Kim has helped organisations adapt to climate change and becoming more energy efficient, through delivering a toolbox of efficiency measures; including undertaking energy and eco-footprint audits for a range of clients - from Ergon Energy; the tourism industry, schools, QLD TAFE; small business and government departments.
